

THIS DRAWING IS TO BE USED ONLY FOR THE PURPOSE OF ISSUE THAT IT WAS ISSUED FOR AND IS SUBJECT TO AMENDMENT

- East Hampshire District Boundary
- South Downs National
- Main River
- Ordinary
- Flood Zone 2
- Flood Zone 3
- Flood Zone 3b

NOTES

1. This map shows the predicted likelihood of fluvial flooding based on the Environment Agency's Flood Map for Planning (Rivers and the Sea) and catchment modelling studies, which may be subject to revision in the future. The Flood Map for Planning is available online (<https://flood-map-for-planning.service.gov.uk/>).
2. The probability of fluvial flooding is divided into the following categories:
 Flood Zone 1- Land having a less than 0.1% annual probability of river flooding (1 in 1,000 chance each year). Show as clear on the Flood Map- at land outside Flood Zones 2 and 3.
 Flood Zone 2- Land having between a 1% and 0.1% annual probability of river flooding (between 1 in 100 and 1 in 1,000 chance each year).
 Flood Zone 3- Land having a 1% or greater annual probability of river flooding (>1 in 100 chance)
3. Flood Zone 3b Functional Floodplain is defined as land where water has to flow or be stored in times of flood, or land purposely designed to flood in an extreme event (0.1% annual probability). For the purpose of this SFRA, land modelled to have a probability of flooding of 5% or greater has been used to identify functional floodplain.
4. Flood extents for climate change and Flood Zone 3b are from hydraulic modelling provided by the Environment Agency (Wey Upper (Haslemere to Passfield), Capita AECOM 2018; Upper Wey (Alton and Passfield to Tiford, Capita AECOM 2020; Deadwater, Capita AECOM 2018; Havant Flood Mapping, Atkins 2008).
5. The Flood Defences data is taken from the Environment Agency's AIMS database
